

INDIAN SCHOOL AL WADI AL KABIR SAMPLE PAPER 2 BIOLOGY (044) SET II

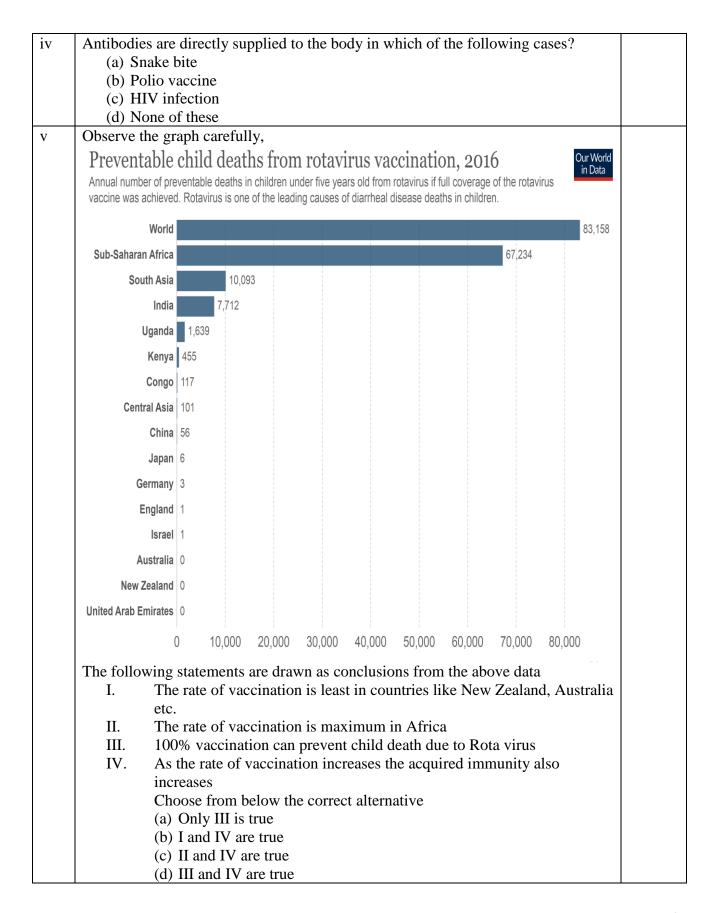

General Instructions

- (i) All questions are compulsory.
- (ii) The question paper has four sections: Section A, Section B, Section C and Section
- D. There are 33 questions in the question paper.
- (iii) Section—A has 14 questions of 1 mark each and 02 case-based questions. Section—B has 9 questions of 2 marks each. Section—C has 5 questions of 3 marks each and Section—D has 3 questions of 5 marks each.
- (iv) There is no overall choice. However, internal choices have been provided in some questions. A student has to attempt only one of the alternatives in such questions.
- (v) Wherever necessary, neat and properly labeled diagrams should be drawn.

SECTION A	
QUESTIONS	MARKS
Circuit and in the second of the second in the improved terms of an decrease H	1

(a) Both assertion and reason are true, and reason is the correct explanation of	
↑	
	Give the special features of cells present in the innermost layer of anther wall In most of the angiosperms, the embryo sac development is monosporic. Justify Seed set is assured in plants like <i>Commelina</i> and <i>Oxalis</i> . Give reason. Breast – feeding during initial period of infant growth is recommended by doctors for bringing up a healthy baby. Why? Give the genotypic and phenotypic ratio of selfing of a progeny which is produced as a result of crossing of two homozygous plants having contrasting traits (example height of stem) What are the important roles of pedigree analysis in humans? Distinguish between cistron and exon. What is the importance of the microbe <i>Thermus aquaticus</i> in the field of genetic engineering? Name the recombinant protein and its quantity present in the milk of transgenic

of assertion is true but reason is false. (d) Both assertion and reason are false OR Assertion: VNTR probes are used in DNA fingerprinting Reason: VNTR shows high degree of polymorphism and after hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false. Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, and reason is not the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, but reason is not the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time.		(b) Both assertion and reason are true, but reason is not the correct explanation	
(d) Both assertion and reason are false OR Assertion: VNTR probes are used in DNA fingerprinting Reason: VNTR shows high degree of polymorphism and after hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason are true, but reason is not the correct explanation of assertion. (d) Both assertion and reason are true, but reason is not the correct explanation of assertion. (e) Assertion is true but reason are false Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time.		of assertion.	
Assertion: VNTR probes are used in DNA fingerprinting Reason: VNTR shows high degree of polymorphism and after hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason are true, but reason is not the correct explanation of assertion. (d) Both assertion and reason are true, but reason is not the correct explanation of assertion. (e) Assertion is true but reason are true, but reason is not the correct explanation of assertion. (e) Assertion is true but reason are true, but reason is not the correct explanation of assertion. (e) Assertion is true but reason are true, and reason is the correct explanation of assertion. (a) Both assertion and reason are false Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway helps to take carbon		(c) Assertion is true but reason is false.	
Assertion: VNTR probes are used in DNA fingerprinting Reason: VNTR shows high degree of polymorphism and after hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false 22 Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, but reason is not the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are true, but reason is not the correct explanation of assertion. (e) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: Many desert plants have a special photosynthetic pathway Reason: CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time. (a) Both assertion and reason are true, and reason is the correct explanation of		(d) Both assertion and reason are false	
Reason: VNTR shows high degree of polymorphism and after hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, but reason is not the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time.			
hybridization with probes, the autoradiogram gives many bands (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false 2			
(a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false 12 Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion is true but reason is false. (d) Both assertion is true but reason are false Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, but reason is not the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time.			
assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false 2		hybridization with probes, the autoradiogram gives many bands	
(b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false 12 Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion. (c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: Many desert plants have a special photosynthetic pathway known as CAM pathway Reason: CAM pathway helps to take carbon dioxide through the stomata during day time. (a) Both assertion and reason are true, and reason is the correct explanation of		•	
(c) Assertion is true but reason is false. (d) Both assertion and reason are false Assertion: In Escherichia coli, the growth of the bacteriophage is restricted by an enzyme which cuts DNA at specific sites and then added methyl groups to the same DNA. Reason: Cutting of DNA inactivated the bacterial genome and thus inhibiting the growth (a) Both assertion and reason are true, and reason is the correct explanation of assertion. (b) Both assertion and reason are true, but reason is not the correct explanation of assertion is true but reason is false. (d) Both assertion and reason are false Assertion: The biodiversity at the species level is known as species diversity Reason: The variation shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of potency of reserpine. 	(d) Both assertion and reason are false	
15	Read the following and answer any four questions from 15(i) to 15(v) given	4
	below:	
	Immunisation and vaccination	
	Immunization is a global health and development success story, saving millions of	
	lives every year. Vaccines reduce risks of getting a disease by working with your	
	body's natural defenses to build protection. Immunization currently prevents 2-3	
	million deaths every year from diseases like diphtheria, tetanus, pertussis,	
	influenza and measles.	
	minute and mouston	
	The percentage of children receiving DTP vaccine is often used as an indicator of	
	how well countries are providing routine immunization services. In 2019, global	
	coverage rates for the third dose of the DTP3 reached 85 per cent, up from 72 per	
	cent in 2000 and 20 per cent in 1980. Since the use of rotavirus vaccines have	
	been approved, they have had a notable impact on the reduction of rotavirus-	
	related deaths. According to a study published in 2018, the use of rotavirus	
	vaccines prevented approximately 28,900 child deaths globally in 2016. However	
	full vaccine use – that is a 100% coverage globally – could have prevented an	
	additional 83,200 deaths. This means that, even at the current rates of efficacy,	
	53% of all deaths in children under-5 from rotavirus in 2016 could have been	
	avoided by full vaccine coverage.	
i	The process of immunization activates which system of our body?	
	(a) Innate immunity	
	(b) Acquired immunity	
	(c) Passive immunity	
ii	(d) Both (a) and (b)	
11	Identify the vaccine which is given in three booster doses (a) BCG	
	(b) Polio	
	(c) DPT	
	(d) Rotavirus	
iii	Which of the following represents the correct pair of diseases that can be	
	prevented by vaccination?	
	(a) Diphtheria and AIDS	
	(b) Pertussis and Corona (c) Tuberculosis and Totanus	
	(c) Tuberculosis and Tetanus (d) Small pox and Cancer	
	(u) Sman pox and Cancer	l .

16	Read the following and answer any four questions from 16(i) to 16(v) given below:	4
	Haemophilia	
	Haemophilia is a mostly inherited genetic disorder that impairs the body's ability to make blood clots, a process needed to stop bleeding. This results in people bleeding for a longer time after an injury, easy bruising, and an increased risk of bleeding inside joints or the brain. Those with a mild case of the disease may have symptoms only after an accident or during surgery. Bleeding into a joint can result in permanent damage, while bleeding in the brain can result in long term headaches, seizures etc.	
	There are two main types of haemophilia: haemophilia A, which occurs due to low amounts of clotting factor VIII, and haemophilia B, which occurs due to low levels of clotting factor IX. They are typically inherited from one's parents through an X chromosome carrying a nonfunctional gene. Rarely a new mutation may occur during early development or haemophilia may develop later in life due to antibodies forming against a clotting factor. Other types include haemophilia C, which occurs due to low levels of factor XI, and parahaemophilia, which occurs due to low levels of factor V. Acquired haemophilia is associated with cancers, autoimmune disorders, and pregnancy. Diagnosis is by testing the blood for its ability to clot and its levels of clotting factors.	
i	Haemophilia is a/ an disease. (a) Sex linked (b) Autosomal dominant (c) Autosomal recessive (d) Y linked	
ii	If both parents are haemophilic then there isof the child having haemophilia. (a) 25 % risk (b) 50 % risk (c) 75% risk (d) 100% risk	
iii	If father is haemophilic and mother is normal then there isof the son having haemophilia. (a) 25 % risk (b) 50 % risk (c) 75% risk (d) No risk	
iv	If father is normal and mother is haemophilic then there isof the daughter having haemophilia. (a) 25 % risk (b) No risk (c) 75% risk (d) 100% risk	

List the complications which are associated with STDs if n	-
Give any two reasons for common chromosomal disorders	
What would happen to the immune system, if thymus gland body of a person?	
Name two main steps which are collectively referred to as	down streaming 2
process. Why is this process significant?	
OR	
How will you obtain purified DNA from a cell?	
21 Since DNA is a hydrophilic molecule, it cannot pass through	- I
Name and explain the technique with which the DNA is for	rced into-
(i) a bacterial cell (ii) a plant cell	· · · · · · · · · · · · · · · · · · ·
A linear DNA fragment and a plasmid has three restriction	
many fragments will be produced from linear DNA and pla	isinia respectively?
OR Write conventional nomanalature of EcoPI	
Write conventional nomenclature of EcoRI. How many species of plants and animals have been described.	ped by IUCN in 2004? 2
What is global species diversity according to Robert May?	2004! Z
24 List four features which enable the Xeric plants to survive:	in the desert conditions. 2
25 Define cryopreservation. Why is it useful in conserving bio	
SECTION C	
26 Three of the steps of neuro endocrine mechanism in respec	t of parturition are 3
mentioned below.	p
Write the missing steps in proper sequence.	
(a) Signals originate from fully developed foetus and place	nta.
(b)	
(c) (d) Oxytocin causes strong uterine contraction	
(e) Uterine contraction stimulates further secretion of oxyto	ocin.
(f)	
27 In Mendel's breeding experiment on garden pea, the offspr	ing of F2 generation are 3
obtained in the ratio of 25% pure yellow pod, 50% hybrid g	
green pods. State (i) which pod colour is dominant (ii) The	
individuals of F1 generation. (iii) Workout the cross.	
28 Mention any three causes of drug abuse. Suggest some mea	asures for the 3
prevention and control of drug abuse.	

	T	
29	A bacterium <i>Bacillus thuringiensis</i> produces a toxic protein named 'cry protein'	3
	that is lethal to certain insects but not to bacterium.	
	(a) Why this toxin does not kill the bacteria?	
	(b) What type of changes occur in the gut of insects on consuming this protein?	
	(c) How man has exploited this protein for his benefit?	
30	How does the shape of age pyramid reflect the growth status of a Population?	3
	OR	
	What is altitude sickness? What are the causes and symptoms? How does human	
	body try to overcome altitude sickness?	
21	SECTION D	-
31	The pathogen of a disease depends on RBCs of human for growth and	5
	reproduction. The person with this pathogen suffers with chill and high fever.	
	(a) Identify the disease.	
	(b) Name the pathogen.	
	(c) What is the cause of fever?	
	(d) Represent the life cycle of the pathogen diagrammatically.	
	OR	
	Answer the following with respect to Cancer.	
	(a) How does a cancerous cell differ from a normal cell?	
	(b) Benign tumor is less dangerous than malignant tumor. Why?	
	(c) Describe causes of cancer.	
	(d) Mention two methods of treatment of the disease.	
32	State salient features of genetic code.	5
	OR	
	Describe the process of transcription of mRNA in a eukaryotic cell.	
33	Study the figure given :	5
	C C	
	B	
	F	
	A	
i	1	1

(i) Pick out and name the cells that undergo spermiogenesis.

- (ii) Name A, B, C and F.
- (iii) Give ploidy of B and E
- (iv) Mention the function of 'F' cell.

OR

- (I) Give reason for the following:
- (a) The first half of the menstrual cycle is called follicular phase as well as proliferative phase.
- (b) The second half of the menstrual cycle is called luteal phase as well as secretory phase.
- (II) Draw diagrammatic sectional view of Human ovary and label ovum, corpus luteum, Graafian follicle and primary follicle.
