

INDIAN SCHOOL AL WADI AL KABIR  
Post Mid-Term Marking Scheme (2023-24)

Class: IX  
Date: 03/12/2023

Sub: MATHEMATICS (Subject Code 041)  
(SET 1)

Max Marks: 80  
Time: 3 hours

**General Instructions:**

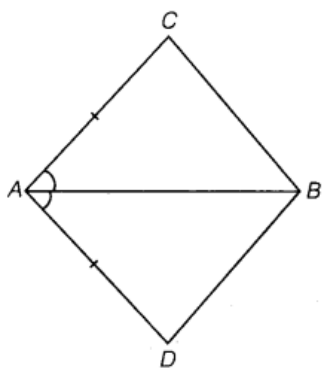

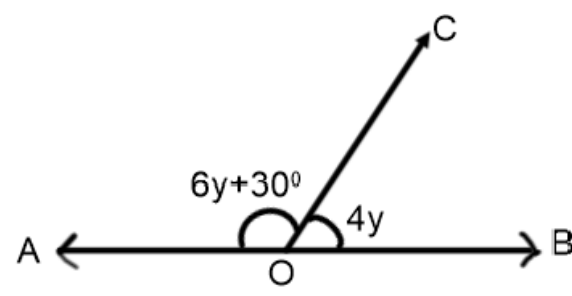

1. This question paper has 5 sections- A, B, C, D and E.
2. Section A- PART-1 (MCQ) comprises of 18 questions of 1 mark each
3. Section A- PART-2 (Assertion and Reason) comprises of 2 questions of 1 mark each.
4. Section B- (Short answer) comprises of 5 questions of 2 mark each.
5. Section C- (Long answer) comprises of 6 questions of 3 marks each.
6. Section D- (Long answer) comprises of 4 questions of 5 marks each.
7. Section E - comprises of 3 Case study-based questions of 4 marks each with sub parts of the values 1, 1 and 2 marks each respectively.
8. All Questions are compulsory. However, an internal choice has been provided for certain questions.

**Section A**

PART-1 MCQ (1 mark each)

|      |   |                    |   |  |   |   |   |    |
|------|---|--------------------|---|--|---|---|---|----|
| Q.1. | The coefficient of x in the expansion of $(x + 3)^3$ is _____.          |                    |   |  |   |   |   |    |
|      | A   |                    | B |  | C |   | D | 27 |
| Q.2. | The points whose abscissa and ordinate have different signs will be in: |                    |   |  |   |   |   |    |
|      | A   | II and IV quadrant | B |  | C |   | D |    |
| Q.3. | On dividing $6\sqrt{27}$ by $2\sqrt{3}$ , we get:                       |                    |   |  |   |   |   |    |
|      | A   |                    | B |  | C | 9 | D |    |

|              |  |                       |          |             |          |       |          |                               |
|--------------|--|-----------------------|----------|-------------|----------|-------|----------|-------------------------------|
| <b>Q. 4.</b> | Degree of the zero polynomial is _____.  |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> | Not defined | <b>C</b> |       | <b>D</b> |                               |
| <b>Q. 5.</b> | The value of $(4)^{\frac{3}{2}} \times (4)^{\frac{5}{2}}$ is _____.  |                       |          |             |          |       |          |                               |
|              | <b>A</b>   | 256                   | <b>B</b> |             | <b>C</b> |       | <b>D</b> |                               |
| <b>Q. 6.</b> | Euclid stated that “the whole is greater than the part” in the form of:  |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> |             | <b>C</b> | Axiom | <b>D</b> |                               |
| <b>Q. 7.</b> | Which of the following is an irrational number?  |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> |             | <b>C</b> |       | <b>D</b> | $\sqrt{5} + \sqrt{9}$         |
| <b>Q. 8.</b> | In a frequency distribution table, the class interval <b>140 – 150</b> has a frequency <b>15</b> . Then the point on the frequency polygon corresponding to this is _____. |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> | (145,15)    | <b>C</b> |       | <b>D</b> |                               |
| <b>Q. 9.</b> | In how many chapters did Euclid divide his famous treatise “The Elements”?   |                       |          |             |          |       |          |                               |
|              | <b>A</b>   | 13                    | <b>B</b> |             | <b>C</b> |       | <b>D</b> |                               |
| <b>Q.10.</b> | The perpendicular distance of the point P(4,3) from x-axis is:   |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> |             | <b>C</b> | 3     | <b>D</b> |                               |
| <b>Q.11.</b> | If $AB = QR$ , $BC = PR$ and $CA = PQ$ , then:   |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> |             | <b>C</b> |       | <b>D</b> | $\Delta CBA \cong \Delta PRQ$ |
| <b>Q.12.</b> | Two angles which are supplementary are in the ratio 2: 7. Then the measures of angles are:   |                       |          |             |          |       |          |                               |
|              | <b>A</b>   | $40^\circ, 140^\circ$ | <b>B</b> |             | <b>C</b> |       | <b>D</b> |                               |
| <b>Q.13.</b> | If the class marks of a continuous frequency distribution are 10, 20, 30, 40....., then the class interval representing the class mark 30 is_____.                         |                       |          |             |          |       |          |                               |
|              | <b>A</b>   |                       | <b>B</b> | 25 – 35     | <b>C</b> |       | <b>D</b> |                               |

|   |  |                 |             |                 |                                  |                           |
|---|--|-----------------|-------------|-----------------|----------------------------------|---------------------------|
| <p><b>Q.14.</b></p>   | <p>In the given figure, the congruency criterion used in proving <math>\Delta ACB \cong \Delta ADB</math> is:</p>  |                 |             |                 |                                  |                           |
|    |  |                 |             |                 |                                  |                           |
| <p><b>A</b></p>   | <p>SAS</p>   | <p><b>B</b></p> |             | <p><b>C</b></p> |                                  | <p><b>D</b></p>           |
| <p><b>Q.15.</b></p>   | <p>The length of each side of an equilateral triangle having an area of <math>9\sqrt{3} \text{ cm}^2</math> is _____.</p>  |                 |             |                 |                                  |                           |
| <p><b>A</b></p>   |  | <p><b>B</b></p> | <p>6 cm</p> | <p><b>C</b></p> |                                  | <p><b>D</b></p>           |
| <p><b>Q.16.</b></p>   | <p>The linear equation <math>4x - 5y = 12</math> has _____.</p>  |                 |             |                 |                                  |                           |
| <p><b>A</b></p>   |  | <p><b>B</b></p> |             | <p><b>C</b></p> | <p>infinitely many solutions</p> | <p><b>D</b></p>           |
| <p><b>Q.17.</b></p>   | <p>In the given figure, if <math>\angle BOC = 4y</math> and <math>\angle AOC = 6y + 30^\circ</math>. What will be the value of <math>y</math> to make AOB a straight line?</p> |                 |             |                 |                                  |                           |
|  |  |                 |             |                 |                                  |                           |
| <p><b>A</b></p>   | <p><math>15^\circ</math></p>   | <p><b>B</b></p> |             | <p><b>C</b></p> |                                  | <p><b>D</b></p>           |
| <p><b>Q.18.</b></p>   | <p>If <b>9</b> is the class mark and <b>6</b> is the lower limit of a class in a continuous frequency distribution, then the upper limit of the class is _____.</p>            |                 |             |                 |                                  |                           |
| <p><b>A</b></p>   |  | <p><b>B</b></p> |             | <p><b>C</b></p> |                                  | <p><b>D</b></p> <p>12</p> |
| <p><b>Q.19</b></p>  | <p>(c) Assertion (A) is true but Reason (R) is false.</p>  |                 |             |                 |                                  |                           |

|              |  |
|--------------|--|
| <b>Q.20</b>  | (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).   |
|              | <b>Section B</b><br>S.A.(2 mark each)  |
| <b>Q.21.</b> | <p><b>Sol.</b> a) Let <math>p(x) = 3x^3 + x^2 - 20x + 12</math>.</p> $x - 2 = 0 \Rightarrow x = 2$ <p>By factor theorem,</p> <p><math>(x - 2)</math> is a factor of <math>p(x)</math>, if <math>p(2) = 0</math>.</p> $p(2) = 3(2)^3 + (2)^2 - 20 \times 2 + 12 \quad (1m)$ $= 24 + 4 - 40 + 12$ $= -12 + 12 = 0 \quad (1m)$ <p>Hence <math>(x - 2)</math> is a factor of <math>(3x^3 + x^2 - 20x + 12)</math>.</p> <p style="text-align: center;">OR</p> <p><b>Sol.</b> b) Given : <math>p(x) = x^2 - kx + 2k</math></p> <p>Since <math>(x - 4)</math> is a factor of the given polynomial <math>p(x)</math>, then <math>p(4) = 0</math></p> $\Rightarrow (4)^2 - k(4) + 2k = 0 \quad (1m)$ $\Rightarrow 16 - 4k + 2k = 0$ $\Rightarrow -2k = -16$ $\Rightarrow k = \frac{-16}{-2} = 8 \quad (1m)$ |
| <b>Q.22.</b> | <p><b>Sol.</b></p> <p>i. Number of teachers aged (45-50) – Number of teachers aged (20-25)</p> $= 5 - 4 = 1 \quad (1m)$ <p>ii. 30 – 35, 6 <span style="float: right;">(1m)</span></p>  |
| <b>Q.23.</b> | <p><b>Sol.</b> <math>2x = 50</math></p> $2x \div 2 = 50 \div 2 \text{ (divide by 2 on both sides)}$ $x = 25. \quad (1m)$ <p>Axiom: Things which are halves of the same things are equal to one another. <span style="float: right;">(1m)</span></p>  |

|  |  |
|--|--|
| <p><b>Q.24.</b></p>                              | <p><b>Sol.</b></p> <p>i. The points identified by the coordinates (11,5) – C and (3,5) – A <span style="color: red;">(½ + ½)</span></p> <p>ii. Find the sum of abscissa of point B and abscissa of point D.</p> <p><i>Abscissa of B = 7</i></p> <p><i>Ordinate of D = 1</i></p> <p><i>Sum = 7 + 1 = 8.</i> <span style="color: red;">(1m)</span></p>   |
| <p><b>Q.25.</b></p>                              | <p>a) Number line <span style="color: red;">(1m)</span></p> <p>perpendicular + locating <math>\sqrt{5}</math> on number line <span style="color: red;">(1m)</span></p> <p style="text-align: center;">OR</p> <p><b>Sol.</b> b) Let <math>x = 1.\overline{28}</math></p> <p><math>x = 1.282828 \dots</math> .....(i)</p> <p>Multiply equation (i) by 100</p> <p><math>100x = 128.2828 \dots</math> .....(ii) <span style="color: red;">(½ m)</span></p> <p>Subtracting equation (i) from equation (ii)</p> <p><math>100x - x = 128.282828\dots - 1.282828 \dots</math></p> <p><math>\therefore 99x = 127</math> <span style="color: red;">(1m)</span></p> <p><math>\Rightarrow x = \frac{127}{99}</math> <span style="color: red;">(½ m)</span></p> |
| <p><b>Section C</b></p> <p>S.A.(3 mark each)</p> |  |
| <p><b>Q.26.</b></p>                              | <p><b>Sol.</b> a) Given: An isosceles triangle ABC, where <math>AB = AC</math> <span style="color: red;">(½ m)</span></p> <p>To prove: <math>\angle B = \angle C</math></p> <p>Construction: Draw the bisector of <math>\angle A</math></p> <p>Let D be the point of intersection of this bisector of <math>\angle A</math> and BC.</p> <p>Therefore, by construction <math>\angle BAD = \angle CAD</math>.</p> <p>Proof:</p>  |

In  $\triangle BAD$  and  $\triangle CAD$ ,

$AB = AC$  (Given)

$\angle BAD = \angle CAD$  (By construction)

$AD = AD$  (Common side in both triangle)

So,  $\triangle BAD \cong \triangle CAD$  (By SAS rule)

(2m)

$\therefore \angle ABD = \angle ACD$  (CPCT)

So,  $\angle B = \angle C$

( $\frac{1}{2}$  m)

Hence proved.

**OR**

**Sol.** b) Given :  $\angle BAD = \angle ABE$

$\angle EPA = \angle DPB$

To prove: (i)  $\triangle DAP \cong \triangle EBP$

(ii)  $AD = BE$ .

Proof: (i) In  $\triangle DAP$  and  $\triangle EBP$ ,

$AP = BP$  (P is the mid-point of AB)

$\angle 1 = \angle 2$  (given)

$\angle 3 = \angle 4$  (given)

$\angle 3 + \angle 5 = \angle 4 + \angle 5$

$\angle APD = \angle BPE$

$\therefore \triangle DAP \cong \triangle EBP$  (ASA congruence)

(2  $\frac{1}{2}$  m)

(ii)  $AD = BE$  (CPCT)

( $\frac{1}{2}$  m)

**Q.27.** **Sol.** a)  $y = 180^\circ - 57^\circ$  (co interior angles,  $AB \parallel EF$ )

$= 123^\circ$

(1m)

$z = 180^\circ - 145^\circ$  (linear pair)  $= 35^\circ$

(1m)

**Q.34.** **Sol.** Given:  $\angle C = 90^\circ$  ,  $\angle B = 90^\circ$

M is the mid-point of hypotenuse AB

DM = CM.

To prove:

- (i)  $\triangle AMC \cong \triangle BMD$ .
- (ii)  $\angle ACM = \angle BDM$ .
- (iii)  $\triangle DBC \cong \triangle ACB$ .
- (iv)  $AB = DC$ .

Proof:

- (i) In  $\triangle AMC$  and  $\triangle BMD$ ,  
AM = BM (M is the mid - point of AB)

$\angle AMC = \angle BMD$  (Vertically opposite angles)

CM = DM (Given)

|  |  |
|--|--|

| <p><b>Q.35.</b></p>  | <p><b>Sol.</b> <math>\frac{\sqrt{11}-\sqrt{7}}{\sqrt{11}+\sqrt{7}} \times \frac{\sqrt{11}-\sqrt{7}}{\sqrt{11}-\sqrt{7}} = \frac{(\sqrt{11}-\sqrt{7})^2}{11-7}</math> <span style="float: right;">(1m)</span></p> <p><math>= \frac{(\sqrt{11})^2 - 2 \times \sqrt{11} \times \sqrt{7} + (\sqrt{7})^2}{4} = \frac{18 - 2\sqrt{77}}{4}</math> <span style="float: right;">(1m)</span></p> <p><math>\frac{\sqrt{11}+\sqrt{7}}{\sqrt{11}-\sqrt{7}} \times \frac{\sqrt{11}+\sqrt{7}}{\sqrt{11}+\sqrt{7}} = \frac{(\sqrt{11}+\sqrt{7})^2}{11-7}</math> <span style="float: right;">(1m)</span></p> <p><math>= \frac{(\sqrt{11})^2 + 2 \times \sqrt{11} \times \sqrt{7} + (\sqrt{7})^2}{4} = \frac{18 + 2\sqrt{77}}{4}</math> <span style="float: right;">(1m)</span></p> <p><math>\frac{\sqrt{11}-\sqrt{7}}{\sqrt{11}+\sqrt{7}} + \frac{\sqrt{11}+\sqrt{7}}{\sqrt{11}-\sqrt{7}} = \frac{18-2\sqrt{77}}{4} + \frac{18+2\sqrt{77}}{4} = \frac{18-2\sqrt{77}+18+2\sqrt{77}}{4} = \frac{36}{4} = 9</math> <span style="float: right;">(1m)</span></p> |
| <p><b>Section E</b></p> <p><b>CASE STUDY BASED QUESTIONS (4 mark each)</b></p> |  |
| <p><b>Q.36.</b></p>  | <p><b>CASE STUDY-1</b></p> <p>i. Let, the amount contributed by Lata = ₹ <math>x</math></p> <p>the amount contributed by Meena = ₹ <math>y</math></p> <p>Then amount contributed by Lata and Meena for Prime Minister's Relief Fund = ₹(<math>x + y</math>)</p> <p><math>\therefore</math> The required linear equation is <math>x + y = 240</math> <span style="float: right;">(1m)</span></p>  |

ii. We have,  $x + y = 240$   
 $x = 124$ ,  
then  $y = 240 - 124 = 116$   
 $\therefore$  the amount contributed by Meena is ₹116. (1m)

iii. a)  $3y = 7$   
 $\Rightarrow 0 \cdot x + 3y - 7 = 0$  is in the form of  $ax + by + c = 0$  where, (1m)

$$a = 0, b = 3, c = -7. \quad (1m)$$

OR

b)  $(2k - 3, k + 2) \Rightarrow x = (2k - 3), y = k + 2$   
 $2x + 3y + 15 = 0$   
 $\Rightarrow 2(2k - 3) + 3(k + 2) + 15 = 0$   
 $\Rightarrow 4k - 6 + 3k + 6 + 15 = 0$  (1m)

$$\begin{aligned} \Rightarrow 7k + 15 &= 0 \\ \Rightarrow 7k &= -15 \\ \Rightarrow k &= \frac{-15}{7} \end{aligned} \quad (1m)$$

**Q.37. CASE STUDY-II:**

(i) a)  $S = \frac{8+10+6}{2} = 12 \text{ cm}$   
 $(s - a) = (12 - 8) = 4 \text{ cm}$ ,  
 $(s - b) = (12 - 10) = 2 \text{ cm}$ ,  
 $(s - c) = (12 - 6) = 6 \text{ cm}$

(1m)

$$\text{Area} = \sqrt{S(S - a)(S - b)(S - c)}$$

$$= \sqrt{12 \times 4 \times 2 \times 6} = 24 \text{ cm}^2 \quad (1m)$$

Therefore, area of the paper used for making each ear of the puppy =  $24 \text{ cm}^2$ .

OR

b) Let the sides of the triangle be,

$$a = 3x, b = 5x, c = 7x.$$

$$\text{then } a + b + c = 300 \Rightarrow 3x + 5x + 7x = 300 \text{ cm}$$

$$\Rightarrow 15x = 300 \text{ cm}$$

$$\Rightarrow x = \frac{300}{15} = 20 \text{ cm} \quad \therefore a = 60 \text{ cm}, b = 100 \text{ cm}, c = 140 \text{ cm} \quad (1m)$$
