a) Border-collapse b) padding c) height and weight d) color

Ans. b) padding

II. Fill in the blanks:

1. Each item in the list is given with tag that specifies the

list item.

2.We can change the default item marking of an unordered list to other shapes by using the CSS list list-style-type property

3.Each horizontal row of cells in a table is defined using the tag <tr>

4.The border-collapse property in the <style> tag is used to create a single border for the table cells.

III. **Application based questions:**

a. Asmi was making an ordered list and she noticed that the items of the list by default started with numbers. She wants to use Roman numerals for numbering. How can she do this?

Ans. <OL type= "I">

b. Nitya was creating a table in HTML5 and she used the basic tags to enter the data. But when she opened the webpage, she noticed that there were no borders around the table. How can she add border to the table she created?

Ans. <style>

Table,TH,TD

{

Border:2px solid black;

}

</style>
