
	INDIAN SCHOOL AL WADI AL KABIR	
Class: XI	Department: SCIENCE 2023 – 24 SUBJECT: CHEMISTRY	Date of submission: 30.04.2023
Worksheet No: 01 WITH ANSWERS	CHAPTER / UNIT: SOME BASIC CONCEPTS OF CHEMISTRY	Note: A4 FILE FORMAT
NAME OF THE STUDENT	CLASS & SEC:	ROLL NO.

Multiple Choice Questions (1 M)

- Which of the following reactions is not correct according to the law of conservation of mass?
 - $2\text{Mg(s)} + \text{O}_2\text{(g)} \rightarrow 2\text{MgO(s)}$
 - $\text{C}_3\text{H}_8\text{(g)} + \text{O}_2\text{(g)} \rightarrow \text{CO}_2\text{(g)} + \text{H}_2\text{O(g)}$
 - $\text{P}_4\text{(s)} + 5\text{O}_2\text{(g)} \rightarrow \text{P}_4\text{O}_{10}\text{(s)}$
 - $\text{CH}_4\text{(g)} + 2\text{O}_2\text{(g)} \rightarrow \text{CO}_2\text{(g)} + 2\text{H}_2\text{O(g)}$
- Which of the following statements indicates that the law of multiple proportions is being followed?
 - Sample of water taken from any source will always have hydrogen and oxygen in the ratio 2:1.
 - Carbon forms two oxides namely CO_2 and CO , where masses of oxygen that combine with a fixed mass of carbon are in the simple ratio 2:1.
 - A 10 g ribbon of Mg burns in oxygen and the entire magnesium converts to its oxide.
 - When two elements combine with a fixed mass of the third element, the ratio in which they do so is a simple whole number ratio.
- Match the items in Columns I and II.

Column I Physical quantity	Column II Unit
i. Molarity	a. gml^{-1}
ii. Mole fraction	b. Mol
iii. Mole	c. molkg^{-1}
iv. Molality	d. Unitless
	e. molL^{-1}

14. An organic compound contains 144g of carbon and 12 g of hydrogen. If molar mass of this compound is 78 gmol^{-1} , calculate:
- Empirical formula
 - Molecular formula
15. How many moles of ethane are required to produce 66 g CO_2 after combustion?
16. A solution is prepared by dissolving 150g of NaCl in 900 g of water. Calculate the mole fraction of each component.
17. How many moles of N_2 are required to produce 85g of NH_3 ? Calculate its mass.

Short answer type (3 M)

18. What do you mean by limiting reagent?
400 g of N_2 and 150 g of H_2 are mixed together to form NH_3 . Identify the limiting reagent and calculate the amount of NH_3 produced.
19. Explain the following (Answer any three)
- Mole fraction
 - Molarity
 - Molality
 - Atomic mass
20. The density of the 2M solution of NaCl is 1.25 g ml^{-1} . Calculate molality of the solution.
21. Identify the limiting reagent if 0.6g of magnesium is added to a 100 ml solution of 0.4M hydrochloric acid. Also, Calculate the mass of hydrogen gas produced.
(Mg = 24u)
22. Caffeine has the following percent composition: carbon 49.48%, hydrogen 5.19%, oxygen 16.48% and nitrogen 28.85%. Its molecular weight is 194.19 g/mol. What is its molecular formula?

Passage based questions (4 M)

23.

Passage based question

One mole is the amount of a substance that contains as many particles or entities as there are atoms in exactly 12 g (or 0.012 kg) of the ^{12}C isotope

This number of entities in 1 mol is so important that it is given a separate name and symbol. It is known as the 'Avogadro constant', or Avogadro number denoted by N_A in honour of Amedeo Avogadro

Information regarding the number of particles as well as the percentage of a particular element present in a compound is essential.

Mass percent of elements in a compound provides a check whether the given sample contains the same percentage of elements as present in a pure sample. In other words, one can check the purity of a given sample by analysing this data.

- Calculate the number of moles present in 44 g of CO_2 .
- Define the term molar mass.

c. Calculate the no of Oxygen atoms in 100 g of CaCO₃.

OR

c. Calculate the mass percentage of all the elements in Glucose.

Long answer type (5 M)

24. a. Commercially available conc HCl is in an aqueous solution containing 40% HCl gas by mass. If its density is 1.2 gcm⁻³, calculate the molarity of HCl solution.

b. Empirical formula of a gaseous compound is CH₂Cl. 0.12 g of the compound occupies a volume of 37.20cc at 105 degree centigrade and 760 mm Hg. Find the molecular formula of the compound.

c. State Avogadro law.

Answers

1	b. $C_3H_8(g) + O_2(g) \rightarrow CO_2(g) + H_2O(g)$
2	b. Carbon forms two oxides namely CO ₂ and CO, where masses of oxygen that combine with a fixed mass of carbon are in the simple ratio 2:1.
3	c. i – e , ii – d , iii – b , iv – c
4	d. 1/12 th of the mass of C ¹² -atom
5	the simple whole number ratio
6	b. CH ₃ COOH
7	d. Formula Unit
8	a
9	d <i>Assertion</i> is wrong and <i>Reason</i> is correct
10	b. Both <i>Assertion</i> and <i>Reason</i> are correct but <i>Reason</i> is not the correct explanation of <i>Assertion</i> .
11	a. A given compound always contains exactly the same proportion of elements by weight. b. If two elements can combine to form more than one compound, the masses of one element that combine with a fixed mass of the other element, are in the ratio of small whole numbers.
12	Mole fraction of A in solution $(x_A) = \frac{n_A}{n_A + n_B}$ Mole fraction of B in solution $(x_B) = \frac{n_B}{n_A + n_B}$ So, $x_A + x_B = \frac{n_A + n_B}{n_A + n_B} = 1$

13	<p>CO – CO $\text{Na}_2\text{CO}_3 - \text{Na}_2\text{CO}_3$ KCl – KCl $\text{H}_3\text{PO}_4 - \text{H}_3\text{PO}_4$ $\text{Fe}_2\text{O}_3 - \text{Fe}_2\text{O}_3$</p>															
14	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Element</th> <th>Mass</th> <th>Moles</th> <th>Ratio</th> <th>Simplest ratio</th> </tr> </thead> <tbody> <tr> <td>C</td> <td>144</td> <td>12</td> <td>1</td> <td>1</td> </tr> <tr> <td>H</td> <td>12</td> <td>12</td> <td>1</td> <td>1</td> </tr> </tbody> </table> <p>Empirical formula = CH Empirical formula mass = 13 $n = 78/13 = 6$ Molecular formula = C_6H_6</p>	Element	Mass	Moles	Ratio	Simplest ratio	C	144	12	1	1	H	12	12	1	1
Element	Mass	Moles	Ratio	Simplest ratio												
C	144	12	1	1												
H	12	12	1	1												
15	<p>$\text{C}_2\text{H}_6 + 7/2 \text{O}_2 \rightarrow 2\text{CO}_2 + 3\text{H}_2\text{O}$</p> <p>No: of moles of $\text{CO}_2 = 66/44 = 1.5$ moles</p> <table style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td></td> <td style="text-align: center;">C_2H_6</td> <td style="text-align: center;">CO_2</td> </tr> <tr> <td>As per eqn</td> <td style="text-align: center;">1 mol</td> <td style="text-align: center;">2 mol</td> </tr> <tr> <td>As per qsn</td> <td style="text-align: center;">?</td> <td style="text-align: center;">1.5 mol</td> </tr> </tbody> </table> <p>Ans: 0.75 moles of ethane.</p>		C_2H_6	CO_2	As per eqn	1 mol	2 mol	As per qsn	?	1.5 mol						
	C_2H_6	CO_2														
As per eqn	1 mol	2 mol														
As per qsn	?	1.5 mol														
16	<p>$n_{\text{NaCl}} = 150 / 58.5 = 2.56$</p> <p>$n_{\text{H}_2\text{O}} = 900 / 18 = 50$</p> <p>$\chi_{\text{NaCl}} = 2.56 / 2.56 + 50 = 0.0487$</p> <p>$\chi_{\text{H}_2\text{O}} = 50 / 52.56 = 0.951$</p>															
17	<p>$\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$</p> <p>No: of moles of $\text{NH}_3 = 85/17 = 5$ moles</p> <table style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td></td> <td style="text-align: center;">N_2</td> <td style="text-align: center;">NH_3</td> </tr> <tr> <td>As per eqn,</td> <td style="text-align: center;">1 mol</td> <td style="text-align: center;">2 mol</td> </tr> <tr> <td>As per qsn,</td> <td style="text-align: center;">?</td> <td style="text-align: center;">5 moles</td> </tr> </tbody> </table> <p>Therefore no: of moles of $\text{N}_2 = 2.5$ moles</p>		N_2	NH_3	As per eqn,	1 mol	2 mol	As per qsn,	?	5 moles
