

**INDIAN SCHOOL AL WADI AL KABIR**  
**Department: Mathematics**  
**Class IX**                      **Worksheet – QUADRILATERALS**

**Questions of 1 mark each**

<b>Q.1.</b>	The angles of a quadrilateral are $x^\circ$ , $(x - 10)^\circ$ , $(x + 30)^\circ$ and $(2x)^\circ$ , the smallest angle is							
	A	68°	B	52°	C	58°	D	47°
<b>Q.2.</b>	In the given figure, ABCD and AEFG are two parallelograms. If $\angle C = 55^\circ$ , determine $\angle F$ .							
	<b>A</b>	35°	<b>B</b>	75°	<b>C</b>	55°	<b>D</b>	105°
<b>Q.3.</b>	In the given fig. ABCD is a rectangle. If $\angle ABE = 30^\circ$ and $\angle CFE = 144^\circ$ , then the measure of $\angle BEF$ is							
	<b>A</b>	36°	<b>B</b>	60°	<b>C</b>	84°	<b>D</b>	90°
<b>Q.4.</b>	The diagonals AC and BD of a parallelogram ABCD intersect each other at the point O. If $\angle DAC = 32^\circ$ and $\angle AOB = 72^\circ$ , then $\angle DBC$ is							
	<b>A</b>	32°	<b>B</b>	40°	<b>C</b>	24°	<b>D</b>	63°
<b>Q.5.</b>	In a square ABCD, $AB = (2x + 3)$ cm and $BC = (3x - 5)$ cm. Then the value of x is							
	<b>A</b>	8	<b>B</b>	5	<b>C</b>	7	<b>D</b>	10

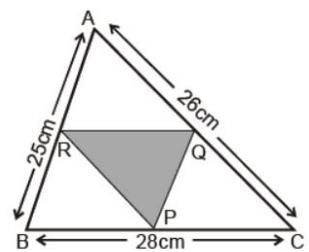

<b>Q.6.</b>	The measures of two adjacent angles of a parallelogram are in the ratio 3 : 2. The measure of the angles are:							
A	52°, 104°	B	74°, 106°	C	108°, 72°	D	102°, 54°	

**Q.7.** In the figure, E and F are mid-points of the sides AB and AC respectively of the  $\Delta ABC$ ; G and H are the midpoints of the sides AE and AF respectively of the  $\Delta AEF$ . If  $GH = 1.8$  cm, find BC.

A	1.8cm	B	3.6cm	C	5.4cm	D	7.2cm
---	-------	---	-------	---	-------	---	-------

**Q.8.** Students were asked to prepare Rangoli in triangular shape. Dimensions of  $\Delta ABC$  are 26 cm, 28 cm and 25 cm. A garland is to be placed along side of  $\Delta PQR$  which is formed by joining midpoints of sides of  $\Delta ABC$ . Then the length of the garden required will be:

A	79 cm	B	37.5 cm	C	39.5cm	D	54 cm
---	-------	---	---------	---	--------	---	-------

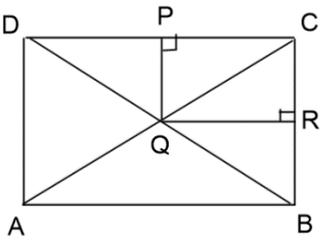

**Q.9.** If one angle of a parallelogram is  $24^\circ$  less than twice the smallest angle, then the measure of the largest angle of a parallelogram is

A	176°	B	68°	C	114°	D	112°
---	------	---	-----	---	------	---	------

**ASSERTION REASONING**

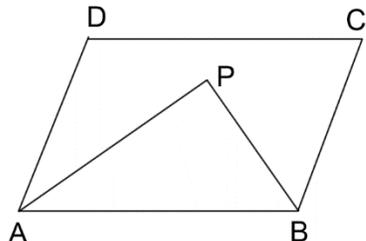

**Directions:** In the following question, a statement of assertion (A) is followed by a statement of reason (R). Mark the correct choice as:

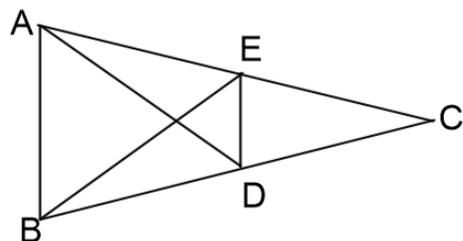

- (a) Both assertion (A) and reason (R) are true and reason (R) is the correct explanation of assertion (A).
- (b) Both assertion (A) and reason (R) are true but reason (R) is not the correct explanation of assertion (A).
- (c) Assertion (A) is true but reason (R) is false.
- (d) Assertion (A) is false but reason (R) is true.

<b>Q.10</b>	<p>ASSERTION: ABCD and PQRC are rectangles and Q is a midpoint of AC. Then <math>DP = PC</math>.</p>  <p>REASON: The line segment joining the midpoint of any two sides of a triangle is parallel to the third side and equal to half of it.</p>
-------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Q.11</b>	<p>ASSERTION: If the angles of a quadrilateral are in the ratio <math>2 : 3 : 7 : 6</math>, then the measure of angles are <math>40^\circ, 60^\circ, 140^\circ, 120^\circ</math>, respectively.</p> <p>REASON: The sum of the angles of a quadrilateral is <math>360^\circ</math>.</p>
-------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Questions of 2 marks each**

<b>Q.12</b>	<p>In a parallelogram ABCD, bisectors of adjacent angles A and B intersect at P. Prove that <math>\angle APB = 90^\circ</math>.</p> 
-------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Q.13</b>	<p>In the given figure, AD is the median and <math>DE \parallel AB</math>. Prove that BE is the median.</p> 
-------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Questions of 3 marks each**

<b>Q.14</b>	<p>Prove that a diagonal of a parallelogram divides it into two congruent triangles.</p>
-------------	------------------------------------------------------------------------------------------

**Q.15** Two parallel lines  $l$  and  $m$  are intersected by a transversal  $p$ . Show that the quadrilateral formed by the bisectors of interior angles is a rectangle.

**Q.16** In the figure, ABCD is a parallelogram. E and F are the mid-points of sides AB and CD respectively. Show that the line segments AF and EC trisect the diagonal BD.

**Q.17** ABCD is a parallelogram and E is the mid-point of side BC. DE and AB on producing meet at F. Prove that  $AF = 2AB$ .

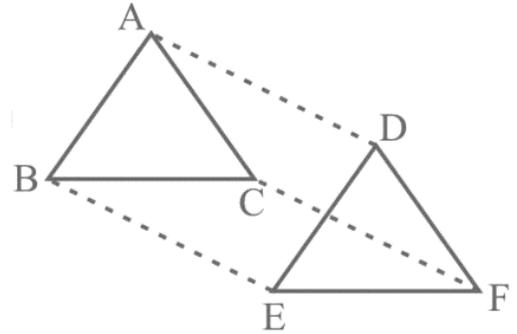

**Questions of 5 marks each**

**Q.18** In  $\Delta ABC$ , D, E and F are respectively the mid-points of sides AB, BC and CA respectively (see fig). Show that  $\Delta ABC$  is divided into four congruent triangles by joining D, E and F.

**Q.19**

In  $\triangle ABC$  and  $\triangle DEF$ ,  $AB = DE$ ,  $AB \parallel DE$ ,  $BC = EF$  and  $BC \parallel EF$ . Vertices A, B and C are joined to the vertices D, E and F respectively. Show that

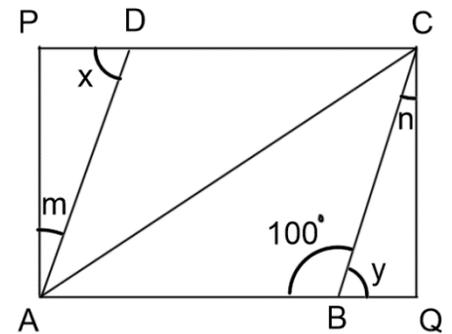

- (i) Quadrilateral ABED is a parallelogram.
- (ii) Quadrilateral BEFC is a parallelogram.
- (iii)  $AD \parallel CF$  and  $AD = CF$ .
- (iv) Quadrilateral ACFD is a parallelogram.
- (v)  $AC = DF$
- (vi)  $\triangle ABC \cong \triangle DEF$ .

### Case study-based (4 marks)

**Q.20.**

In the middle of the city, there was a park ABCD in the form of a parallelogram form so that  $AB = CD$ ,  $AB \parallel CD$  and  $AD = BC$ ,  $AD \parallel BC$ . Municipality converted this park into a rectangular form by adding land in the form of  $\triangle APD$  and  $\triangle BCQ$ . Both the triangular shape of land were covered by planting flower plants.

On the basis of the above information, solve the following questions:

- (a) Show that  $\triangle APD$  and  $\triangle BCQ$  are congruent.

OR

What is the value of  $\angle m$ ?

(2)

- (b) Which side is equal to PD?

(1)

- (c) Show that  $\triangle ABC$  and  $\triangle CDA$  are congruent.

(1)
