

LESSON: PLANTS AND ANIMALS NEED WATER

RESOURCE PERSON: Veda Vijay

WORKSHEET-1

NAME: _____ CLASS: III SEC: _____ DATE: _____

I. Fill in the blanks.

1. The process by which a seed grows into a young plant is called _____.
2. The part of the plant which absorbs water from the soil is the _____.
3. Animals that can live only in water are called _____.
4. _____ is the main source of water on the earth.
5. The leaves in the cactus plants are converted into _____ to reduce the loss of _____.

II. Name the following.

1. Give two examples of aquatic plants. _____
2. Give two examples of aquatic animals. _____
3. Give two examples of desert animals. _____
4. Name two processes for which plants need water.

5. Name two needs of water for animals.

III. State whether the following are 'True' or 'False'.

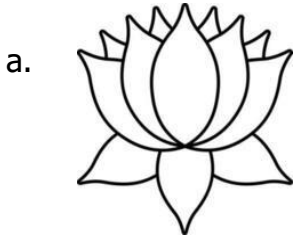

1. All plants and animals need the same amount of water to live. _____
2. Camels can survive in a desert without water for many days. _____

IV. Observe the given pictures and answer the questions that follow.

1. Among the following flowers given below, colour the National Flower of India.

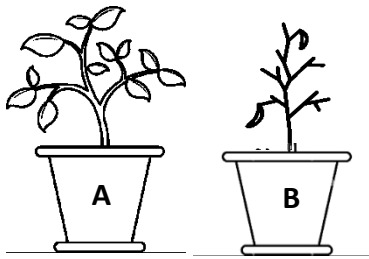

a. It is an example of a _____ plant.

b. It grows only in _____.

2. Read the statements given below and tick the correct reason.

Sam planted the same type of plants in pot A and pot B. Every day, he watered pot A with water but not pot B. After two weeks, he noticed that the plant in pot A was healthy and green whereas the plant in pot B had died. What would be the reason for it?

a. Both plants in pot A and pot B are watered.

b. Water is needed by plants to make food. Without it they would die. The plant in pot A had water but the plant in pot B had no water. So, it died.

c. Some kinds of plants grow only in pot A and some plants cannot grow in pot B.

3. Read the passage and tick the correct statements.

Elephants happily swim, play and bathe in water. They use their trunks to spray water over their body. The trunk looks like a long nose and is used for smelling, breathing, and trumpeting. The elephant's trunk is also like a hand and can perform delicate moves like picking a delicious berry. Elephants fill their trunks with water and pour the water into their mouths to drink. It can contain up to 8 litres of water. So, the elephant trunk is a nose, hand, and hose pipe.

a. The elephant uses its trunk to spray water on its body.

b. The elephant is an aquatic animal.

c. The elephant takes bath in water and also needs water to drink.
