Case study- based questions

CASE STUDY QUESTION A:

Lavanya throws a ball upwards, from a rooftop, which is 20 m above from ground. It will reach a maximum height and then fall back to the ground. The height of the ball from the ground at time t is h , which is given by $h = -4t^2 + 16t + 20$.

Q.14. What is the height reached by the ball after 1 second?

Q.15. How long will the ball take to hit the ground?

Q.16. What are the two possible times to reach the ball at the same height of 32 m?

Q.17. Where is the ball after 5 seconds?

CASE STUDY QUESTION B:

An asana is a body posture, originally and still a general term for a sitting meditation pose, and later extended in hatha yoga and modern yoga as exercise, to any type of pose or position, adding reclining, standing, inverted, twisting, and balancing poses. In the figure, one can observe that poses can be related to representation of quadratic polynomial.

Q.18. Name the shape of the poses shown above.

Q.19. Find the zeroes of the quadratic polynomial $4\sqrt{3}x^2 + 5x - 2\sqrt{3}$.

Q.20.

Find the zeroes from the above graph and frame the quadratic polynomial.

Q.21.

If the sum of the root is $-s$ and the product of the roots is $-\frac{1}{s}$, then form the quadratic polynomial.
